

Leading exponential geometry: $S_{\pm} = \pm 2st$, $\Delta S = 4st$

physical z -plane ($\arg q = 0$)

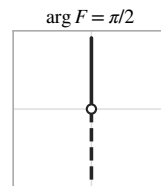

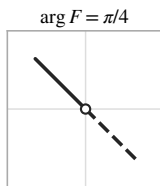

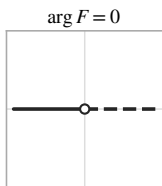

two-sheeted cover: $z = t^2$, $s^2 = -q$

(c)

rotation in fixed z coordinates

--- equal modulus: $\Re \Delta S = 0$ — constant phase: $\Im \Delta S = 0$

$$U_X H(F) U_X^\dagger = H(F e^{iX}): \text{rotation, not a spectral change}$$
